Benchmark Requirements

Task: Complete and validate the Beamer presentation *“Analysing University Library Space Utilisation and Student Study Patterns.”*

Requirements

1. Open and compile as a Beamer presentation in Overleaf/LaTeX.
2. Preserve the embedded synthetic dataset covering 72 observations across three study zones, four observation periods, and six days.
3. Include the literature review and appropriate academic citations.
4. Present the methodology, including the occupancy rate calculation.
5. Present descriptive statistics for occupancy, study duration, student entries, and satisfaction.
6. Compare library space utilisation across study zones, observation periods, and days.
7. Present the Pearson correlation analysis and interpret the relationships as associations rather than causal effects.
8. Present the results, discussion, recommendations, limitations, and conclusion.
9. Keep the presentation self contained, with no dependence on external datasets or images.
10. Produce a clear, complete academic defense presentation suitable for review.

Validation expectations

- The embedded dataset must remain internally consistent.
- Numerical results presented in the slides must correspond to the project data.
- References and in text citations must compile correctly.
- The final presentation should contain 22 slides/pages.
- The project should compile successfully in its correct state.
